

Are you a caregiver of a child who previously had cancer? Would you like to join a patient-oriented research team?

Patient-oriented Research

Patient-oriented research involves people with lived experience in the research project to help ensure the project focuses on patient-identified priorities and improves patient-related outcomes.

The Current Study

The current study aims to explore the use of social media support groups by caregivers of children with cancer.

If you decide to participate, you will be given \$40 after each meeting

What is Your Role?

We are currently looking for caregivers living in an Atlantic province whose children are in remission from cancer to be a part of our patient advisory committee. Over the next 1-2 years, you will meet with members of the UNB research team 3-4 times with 1-2 other caregivers to actively contribute to the project.

If you are interested, please contact **Louise Bell** at louise.bell@unb.ca
