REB #: 5347

The relation of primary teeth and mental health conditions: Leveraging Tooth Fairy

We are exploring how mental health and oral health affect each other, and whether children with/without mental or developmental conditions show differences in primary tooth mineralization.

All parents living in Canada are eligible to participate if their child is:

- 1. aged 5-17 years old, and**
- 2. with a fallen-out or removed baby tooth that they want to send us**
 - a) Parents can send a baby tooth that has already fallen out or been removed to our site or mailing it (We'll reimburse regular mailing costs)**
 - b) followed by completing an online survey.**

Parents will be given a gift card.
